<p align="center"><b>10 FRACTURE MATCH EXAMINATION</b></p> <p><b>10.1 Introduction</b></p> <p>The process of matching two or more objects either through physical, optical, microscopic, or photographic means, which permits one to conclude whether the objects were either one entity that was broken, torn, or separated, or were held or bonded together in a unique arrangement constitutes a fracture match. The examination may determine whether or not two or more objects were at one time joined and were a part of the same unit. Other related procedures include casting, and microscopic comparison.</p> <p><b>10.2 Safety Considerations</b></p> <p>Examinations performed in the Firearm and Toolmark Section are inherently hazardous. These procedures involve hazardous chemicals, firearms, ammunition, and power tools. All hazardous procedures must be performed in compliance with the DFS Safety Manual.</p> <p><b>10.3 Preparation</b></p> <p>NONE</p> <p><b>10.4 Instrumentation</b></p> <ul style="list-style-type: none"> <li>• Stereo microscope</li> <li>• Comparison microscope</li> <li>• Photographic equipment</li> <li>• Casting materials</li> <li>• Other equipment as needed</li> </ul> <p><b>10.5 Minimum Analytical Standards and Controls</b></p> <p>NONE</p> <p><b>10.6 Procedure or Analysis</b></p> <p>The evidence will be marked in accordance with the Quality Manual. A systematic approach should be used for the fracture match examination, with recording of findings and observations in the notes by documenting and/or photographing the separated items.</p> <ul style="list-style-type: none"> <li>• Initial visual inspection of the items submitted would include evidence of: <ul style="list-style-type: none"> <li>Coatings</li> <li>Method of separation</li> <li>Physical composition</li> <li>Color</li> <li>Dimensions of items</li> <li>Pattern</li> <li>Appearance and/or distortions of the separated edges</li> <li>Cross-sectional contours</li> <li>Incidental striations or scratches</li> <li>Extrusion markings</li> <li>Conchoidal stress lines and hackle marks</li> <li>Trace material</li> </ul> </li> </ul>
